

## Assembly Instruction:

**LIEBHERR HS 885 HD - Rope excavator**

**Item no. 2831**

1. Remove the adhesive strip from the rear rope drum.
2. Unwind the rope almost entirely.
3. Reeve the rope as shown on the picture.

4. Now thread the top of the rope after reeving in the visible hole of the rope drum and wind the rope up.
5. Attach now the two extension lattice boom sections and the lattice boom top to the ground part.
6. Enclosed find 6 ropes. Two of them are to be pushed with the hooks in the loops on the boom top on each side. Expand the anchoring with the remaining 4 ropes by pressing two loop sides on the assigned hooks of the balance at the A-block. Lift the boom while doing this as much as necessary.
7. The boom is now infinite variable by using the crank on the rope drum.
8. Finally pull the remaining rope being winded upon the big rear drum over the boom and the pulleys and tie it on the hook.
