Der neue Gehweg  
The new sidewalk

Die Absicherung der Baustelle ist zwingend notwendig. The securing of the construction site was not forgotten.

Alles wurde auf den Modellbaumaßstab 1:50 abgestimmt und trotz des relativ kleinen Bauvorhabens ist viel „Aktion“ in der Szenerie. Der Raupenfertiger trägt momentan eine Zwischenschicht auf den vorbereiteten Gehweg auf. Everything has been adapted to the 1:50 model scale and despite the relatively small construction project, there is a lot of „action“ in the scenery. The tracked paver is currently applying an intermediate layer to the prepared sidewalk.

## THE THOUGHT

As soon as he opened the packaging, model builder Heinz Hofmann from Berlin knew that he did not want to simply put the new “Vögele Super 800i” tracked paver on a shelf, but wanted to present it in an appropriate setting. Thus the idea of a small diorama was born, the subject of which was quickly found - the reconstruction of a sidewalk.

## THE MINIATURE LANDSCAPE

The then created diorama has a size of 60 x 30

cm and fits very well into the existing collector's shelf. It shows a sidewalk along a paved street (Flexyway by Juweela) in a loosely built-up area

### On 0.18 square meters plays the scenery.

with street lighting. The lamps in the appropriate scale of 1:50 are from the Beli-Beco program and enrich the scenery excellently in which the existing but quite battered sidewalk gets a new bitumen coating. The construction work is

carried out by the construction specialist “ATPS”. Since the sidewalk is also newly prepared, the renovation was presumably preceded by cable and pipeline work, but was not realized in the showpiece.

In the scene, Vögele's narrow paver 800i, which is suitable for this type of work, is currently applying an intermediate layer to the prepared base of the walkway. One part of the path has already been provided with a bituminous layer from the model accessory manufacturer “AK”, the

other part has been prepared with sand/gravel rolling for further application of the new surface course. To increase the safety of the builders, the working area is secured with a barrier tape, which as well as the holding bars, was made in a somewhat elaborate handcraft work by the builders themselves. Figures from Conrad and Preiser and small accessories from Modellbau-Leben and Addie round off the typical scene from everyday road construction with a planting of grasses from the accessories producer “Lars op 't Hof” from the Netherlands. |
